Education

York University, Lassonde School of Engineering — Toronto, ON
Bachelor of Arts, Specialized Honours in Digital Media (Development Stream) — *Expected 2027*

- **Coursework:** Advanced Object-Oriented Programming, Software Tools, User Interfaces, Creative Coding

Seneca Polytechnic — Toronto, ON
Advanced Diploma, Computer Programming & Analysis — *2020 – 2023*

- **Coursework:** Cloud Computing, Software Analysis and Design, Project Planning and Management
- **Award:** President's Honour List (4.0 term GPA), 2022

Technical Skills

Programming Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS
Frameworks & Tools: React.js, Git, ArcGIS Online, Jira, Flowable, Excel
Cloud & DevOps: AWS (Lambda, Cognito, Amplify, QuickSight, Redshift), Docker, Kubernetes
Languages: Italian (Native), English (Fluent), Tigrinya (Native)

Work Experience

MPAC (Municipal Property Assessment Corporation) — Toronto, ON
Junior Systems Developer (Full-Time Contract) — *Apr 2025 – Oct 2026*

- Built a React work-object investigation dashboard from the ground up with a staff AI engineer: KPIs, backlog aging, regional breakdowns, closure trends, and a weekday-aware closure projection over AWS Redshift data
- Deployed an AWS QuickSight dashboard to replace a blocked Power BI rollout; delivered both dashboards to the VP
- Rebuilt legacy sign-in with AWS Amplify and Cognito, adding MFA and Google reCAPTCHA bot protection
- Built an AWS Lambda post-authentication trigger to collect login metrics, and automated weekly user reports
- Re-architected ArcGIS field mapping to fetch aliases via the Esri REST API, ending schema-change redeploys
- Fixed ArcGIS Online Insight rendering to hide system and invisible fields and show raw dates as readable timestamps
- Fixed an iOS crash and a spatial hit-testing bug for field valuers; added tab-key navigation and CSS stacking fixes
- Took ownership of data-drift validation across 12 business domains after a teammate left, with daily verification
- Trained a summer student on field-support workflows and wrote guides for property roll-number mismatches
- Handled 280 tickets across both roles, including stuck Flowable cases resolved within SLA, under change management

Junior Systems Developer (Co-op) — *Jan 2023 – Sep 2023*

- Automated company-wide offboarding on AWS Lambda (Python): Facilities/Communications notices and Jira tickets
- Built Intro.js onboarding/offboarding walkthroughs, enforced role-based endpoint authorization, and wrote unit tests
- Modernized UI components, including a login page redesign and a theme-switcher toggle with custom SVG icons

Personal Projects

Casefile – AML Investigation Assistant | Python, LangGraph, SQLite, React, TypeScript — **2026**

- Built an AI agent that drafts anti-money-laundering case write-ups; plain code checks every amount, date and ID
- Wrote a verifier that flagged all 417 deliberately corrupted claims, with 0 of 994 clean claims falsely flagged
- Developed a FastAPI REST API over read-only, parameterized SQL tools, a React/TypeScript UI and 36 tests in CI

RootCause – Incident Diagnosis Agent | Python, LangGraph, FastAPI, React, OpenTelemetry — **2026**

- Built an on-call agent that finds why a microservice broke, then re-queries metrics and traces to prove it
- Simulated a 15-service online store with 10 OpenTelemetry Demo failure flags, so every test has a known answer
- Wrote 52 automated tests plus a CI check that fails the build if diagnosis accuracy drops more than 5 points
